

Full Stack Squad: Progress Metrics

- **Current Progress:** 5% (1 out of 20 core bootcamp slots completed).
- **Current Focus:** Week 1 Mandate — UI Fidelity & Component Architecture (Parent/Child layouts & structural nesting).

The Daily Drop Blueprint

Title: Full Stack Squad: Week 1, Tuesday - Parent/Child Architecture & Complex Dashboard Cards

Section A: Today's Materials (The Synthesis Mandate)

You must synthesize the information from all sources below to complete today's execution mandate. Do not consult outside tutorials.

1. The Video Drills (Watch These First)

- **Scrimba Anchor 1:** [Learn React - Modules: "Custom Components - Parent/Child Components 5:19" & "Styling with Classes 8:42"](#)
- **Scrimba Anchor 2:** [Build a Product Card with Tailwind CSS - Modules: "Crafting the card 2:57" & "Styling the buttons 5:53"\[cite: 8\]](#)
- **External Video 1:** [YouTube: Tailwind CSS Flexbox & CSS Grid Mastery for Dashboard Layouts](#)
- **External Video 2:** [YouTube: Advanced TypeScript Interfaces — Nesting and Optional Properties](#)

2. Required Technical Documentation

- **Primary Architecture Doc:** [Next.js Official Docs: Reusable Layout Structures](#)
- **Styling Architecture Doc:** [Tailwind CSS Docs: Designing Grids and Flex Containment](#)
- **Type Safety Doc:** [TypeScript Handbook: Nested Object Interfaces](#)

3. Engineering Assets

- **Design Asset:** [Figma Community: SaaS Metrics and Analytic Cards \(Focus on Grid Alignments\)](#)
- **Data Asset:** [JSON Dummy Payload: Complex Metrics Graph Object Schema](#) (Use this JSON format blueprint to design your TypeScript typing bounds).
- **Media/Icon Asset:** [Lucide React Enterprise Vector Icons Package](#)

Section B: The Execution Mandate (9:00 AM - 2:00 PM)

1. Execution Summary (TL;DR)

- **Objective:** Construct a highly modular, multi-layered <DashboardCard/> parent component using Tailwind Flexbox/Grid layouts that wraps and styles nested child elements safely under a unified, strict TypeScript interface.

2. The Workflow:

- **9:00 AM - 10:00 AM (Learning):** Watch your assigned Scrimba videos regarding Parent/Child workflows and styling mechanics[cite: 8, 9]. Cross-reference the Tailwind grid alignment documentation to plan your container ratios.
- **10:00 AM - 1:00 PM (Building):**
 - **Action 1 (Setup/Init):** Inside your existing repository, build a new structural component subdirectory at components/dashboard/.
 - **Action 2 (Core Execution):** Craft a composite <DashboardCard/> component matching the exact dimensions, border rules, and typography from the Figma Design Asset. Nest your Monday <Button/> component securely inside this layout as a child module.
 - **Action 3 (Integration/Typing):** Design an explicitly structured TypeScript contract (DashboardCardProps) that models metrics properties (labels, values, trends). You must accept arrays or conditional indicators without breaking type compilation boundaries.
 - **The Non-Negotiable Rules:**
 1. Custom CSS rules are prohibited; apply utility-first Tailwind classes exclusively to avoid namespace collision risks. The any bypass type is banned.
 2. No live network operations or interactive event hooks are allowed today; focus strictly on structural prop-driven rendering layout engine precision.
- **1:00 PM - 1:30 PM (Hygiene):** Run your Next.js local compiler suite (npm run build) to ensure clean compilation. Push your code directly to your **Public** GitHub repository repository under tracking.
- **1:30 PM - 2:00 PM (LinkedIn):** Draft a daily professional field review highlighting how you structured parent/child React code with strict typed bounds. Hyperlink your ProSensia admission card link into your timeline post body.

Section C: Submission Protocol (Due strictly by 2:00 PM)

- **Step 1 (The Kanban Board):** Slide this task slot completely into the "Under Review" column tracking slot on your workspace board.
- **Step 2 (The Assignments Module):** Access your native web Portal Assignments workspace block. Drop your public GitHub Repository link and your active LinkedIn status link into the tracking fields. **Do not DM Management your links.**
